

Additional Information

Since moving to Eaton in 1989, I have worked locally as an Electrical Technician for both small and large businesses.

My wife and I also were self-employed by our own Computer Consultancy for 10 yrs, concentrating on Training and Programming.

Having experience on both ends of the business scale and with infrastructure industry, I have gained experience that I believe that will benefit the community in these spaces. Particularly as I am a "detail-oriented" person and I am at a point in my life to be able give this role the time and importance that it needs. I am a member of the South West Model Engineers Association, or the Forest Park Miniature Railway and volunteer some of my time there.

Like most of us here in the Southwest, living in our smaller communities, I enjoy the environments, both the physical and social, in which we live.

These are largely products of the work done by past Council representatives, both elected and employed and I would like to continue building on the good community that we already have.

As Elected Members are essential representatives of the community's input to any policy making carried out by Council, they should be approachable, respectful and act without bias when dealing with issues.

I believe that they also need to be able to compromise and be innovative to enable road blocks to be negotiated.

With my work history and being a husband, father of four, grandfather of six (so far) - I am well versed with the above attributes.

The opportunity to help shape our community programs, projects and budget with transparency and a clear understanding of what this role requires, I believe I can be an effective elected member of the Shire of Dardanup.
